

"FOR CUTTING TIES, TIMBERS AND CANTS YOU JUST CAN'T BEAT IT"

It's a Poor Man's Carriage... "I say that because you don't need an engineer on staff to run a Cleereman, they're so simple and easy to run and maintain... and priced right to start with... plus the real cost of owning a Cleereman is the absolute lowest. I've run about every major brand of sawmill, having owned and operated 12 or 13 Cleereman mills you could say we're sold! We're running three 36" 3HB and one 38" 4HB currently... they just last and last... less moving parts, track and wheels last 20 years... we cut ties, mat timbers and cants day in and day out in all four mills and the last thing I worry about are my Cleereman mills"
